BLOCK REEVING

WIRE ROPE EFFICIENCY OVER SHEAVES (TACKLE BLOCK SYSTEM)

Some portion of a wire ropes strength—when operating over sheaves—is expended in turning the sheaves and in flexing. This lost strength is not available to lift the load, and in a multi-part tackle block system this loss factor can be significant.

This load on the lead line (fast line) under static (no-movement) conditions can be readily calculated if the load is divided by the number of parts of line as expressed in the following formula.

$$\text{Fast line load} = \frac{\text{Total load (incl. slings, containers, etc.)}}{\text{No. of parts of line}}$$

For example, in a four-part system to lift 6000 lb. the lead line will equal: $6000 \text{ or } \frac{1500 \text{ lb.}}{4}$

A. ONE-PART LINE

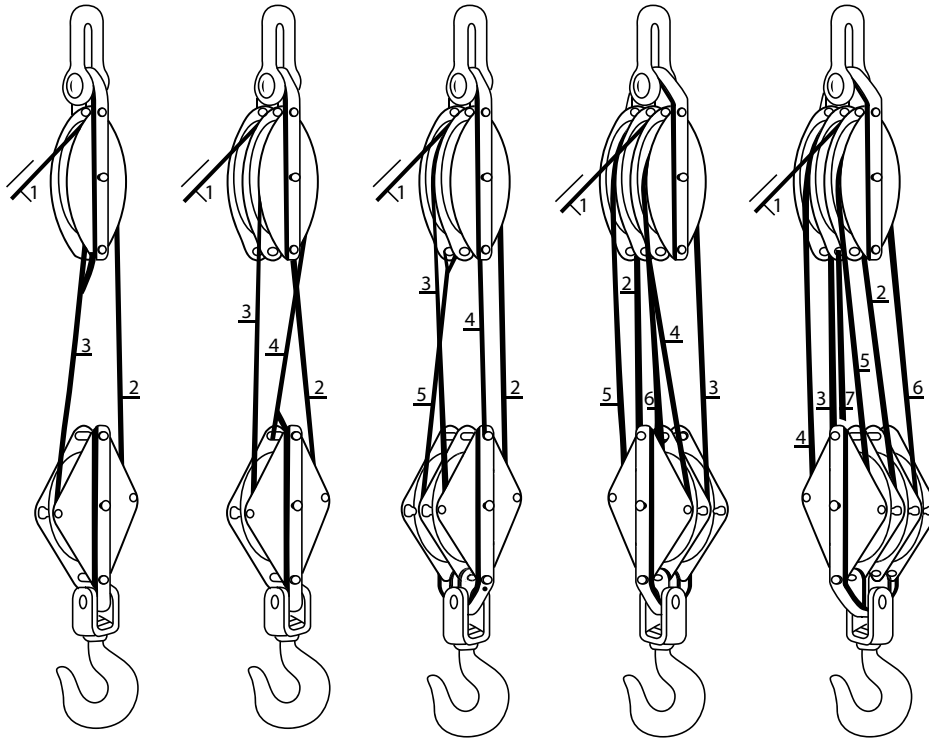

B. TWO-PART LINE

C. THREE-PART LINE

D. FOUR-PART LINE

E. FIVE-PART LINE

METHOD OF REEVING MANILA & WIRE ROPE BLOCKS

Methods of REEVING TACKLE BLOCKS vary with the application and purpose for which they are to be employed, especially on Heavy Lift Cargo Booms, Cranes, etc. where Block with 4 Sheaves or more are required, in which case a number of Lead Blocks have to be considered. We will be glad to consult with you on this matter.

PARTS OF LINE	"E" FACTORS BRONZE BUSHED	"E" FACTORS ROLLER BEARING
1	0.96	0.98
2	1.85	1.9
3	2.8	2.9
4	3.6	3.8
5	4.4	4.7
6	5.2	5.6
7	5.9	6.5
8	6.6	7.3
9	7.3	8.2
10	7.9	9.0
11	8.5	9.8
12	9.1	10.6

METHOD OF FIGURING "PARTS OF LINE"

$$\frac{L}{P} = E$$

L = Load Lifted in Lbs.
P = Line Pull in Lbs.
E = Efficiency Factor

For Example: To figure "Parts of Line" required when Load Lifted "L," and Line Pull "P" are known.

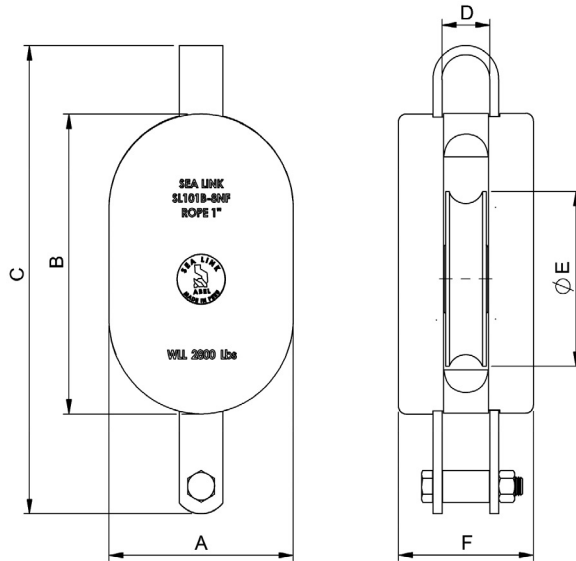

$$\frac{32,000 \text{ lbs (Load Lifted "L")}}{6,000 \text{ lbs (Line Pull "P")}} = 5.3 \text{ ("E")}$$

"E" factor 5.3 in table indicated 6 "Parts of Line" required.

NOTE xx = To be replaced by metric wire size in final part number n TBD = These dimensions vary with wire size

- The dimensions in this table are indicative only. A drawing will always be submitted prior to production and will be the leading document when discussing dimensions.
- Blocks shown here are standard models; inquiries for custom versions are welcome.
- Refer to wire rope manufacturers D/d ratio guideline.
- Hook locking pin included on all blocks 40M ton and higher

Minimum Ultimate Strength = 4 x WLL.

Minimum Ultimate Strength = 4 x WLL.

- Standard fitted with becket, cylindrical roller bearing and reeving guide.
- Standard fitted with Crosby type of swivel only hook (319AN style), including safety latch and split pin. Standard painted yellow (no striping).
- This crane block may be used with 2 lines only as well.
- Third party testing with certification available upon request.
- Sheaves may be adjustud for other wire rope diameters.
- Becket suitable for connecting Open Wedge Socket for indicated wire rope.
- Becket cannot be adjusted.

Minimum Ultimate Strength = 5 x WLL

WLL= Working Load Limit on head fitting.

- All blocks up to 30 tons are standard supplied with swivel oval eye, for over 30 tons with swivel stud eye.
- All blocks can be supplied with swivel hook, swivel stud eye or swivel jaw.
- Standard supplied with bronze bearings.
- Other bearings available on request.
- Groove in sheave may be adjusted to other wire rope diameters.
